

## The solid injection mortar for standard applications in cracked concrete and masonry

High-bay warehouses

Air conditioning units

### BUILDING MATERIALS

#### Approved for anchorings in:

- Concrete C20/25 to C50/60, cracked
- Hollow blocks made from lightweight concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Solid brick

#### Also suitable for:

- Rebar connections
- Concrete C12/15
- Hollow blocks made from concrete
- Aerated concrete

### ASSESSMENT/APPROVAL

ETA-10/0352  
ETAG 001-5

ETA-15/0253  
ETAG 029

Masonry  
Use categories b, c or d  
and d/d or w/w

Masonry  
Use categories b, c or d  
and d/d or w/w

Fire resistance  
classification  
**R 120**

Anchor types  
see test report

### ADVANTAGES

- The FIS VL is approved for use in cracked concrete and masonry, and achieves a high load-bearing capacity in these conditions.
- The injection mortar, based on vinyl ester resin, allows for anchorings in water-filled drill holes (410 ml cartridges only), thus allowing for rapid progress.
- The temperature resistance of the FIS VL injection mortar of -40 °C to +120 °C allows for a solid load level even when subjected to high temperature demands, thus providing great flexibility.
- FIS VL HIGHSPEED has a significantly shorter curing time than FIS VL, thus also ensuring swift work progress even at low temperatures.

### APPLICATIONS

#### Injection mortar for use with:

- Threaded rods FIS A, see page 160 (concrete) and page 178 (masonry)
- Internal threaded anchor RG MI, see page 147
- Injection anchor sleeves FIS H, see page 193

### FUNCTIONING

- The FIS VL is a 2-component injection mortar based on vinylester.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the static mixer.
- The 410 ml coaxial cartridge can be easily used with the fischer FIS AC dispenser.
- Partially used cartridges can be reused, simply by changing the static mixer.
- Related accessories for use in concrete and masonry can be found on page 138.

### FOR USE WITH

Equipment for  
concrete  
from page 160

Equipment for  
masonry

## CURING TIME FIS VL

Cartridge temperature (mortar)	Gelling time	Temperature at anchoring base	Curing time
		- 5°C - ± 0°C	24 hrs.
+ 0°C - + 5°C	13 min.	± 0°C - + 5°C	3 hrs.
+ 5°C - +10°C	9 min.	+ 5°C - +10°C	90 min.
+10°C - +20°C	5 min.	+10°C - +20°C	60 min.
+20°C - +30°C	4 min.	+20°C - +30°C	45 min.
+30°C - +40°C	2 min.	+30°C - +40°C	35 min.

The above times apply from the moment of contact between resin and hardener in the static mixer.

For installation, the cartridge temperature must be at least +5 °C. For longer installation times, i.e. when interruptions occur in work, the mixer should be replaced.

## CURING TIME FIS VL HIGH SPEED

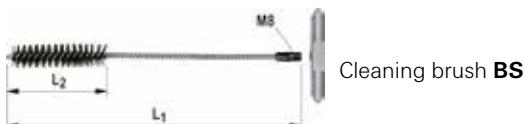

Cartridge temperature (mortar)	Gelling time	Temperature at anchoring base	Curing time
		-15°C - -10°C <sup>1)</sup>	12 hrs.
		-10°C - - 5°C <sup>1)</sup>	8 hrs.
- 5°C - ± 0°C <sup>1)</sup>	5 min.	- 5°C - ± 0°C	3 hrs.
0°C - + 5°C	5 min.	± 0°C - + 5°C	90 min.
+ 5°C - +10°C	3 min.	+ 5°C - +10°C	45 min.
+10°C - +20°C	1 min.	+10°C - +20°C	30 min.

<sup>1)</sup> Without approval.

The above times apply from the moment of contact between resin and hardener in the static mixer.

For installation, the cartridge temperature must be at least +5 °C. For longer installation times, i.e. when interruptions occur in work, the mixer should be replaced.

ETAG 001-5

See ICC-ES Evaluation Report at [www.icc-es.org](http://www.icc-es.org)

Fire resistance classification

R 120

Anchor types:  
see test report

### ADVANTAGES

- The system comprising threaded rod FIS A and one of the injection mortars FIS V, FIS VW HIGH SPEED, FIS VS LOW SPEED, FIS EB, FIS VL for cracked concrete (M10 to M30) and non-cracked concrete (M6 to M30) or FIS GREEN for non-cracked concrete can be individually selected based on requirements, thus allowing for a wide range of applications.
- Variable anchorage depths allow for ideal adaptation to the load to be applied, and ensure an optimised installation time and use of materials.
- Push-through installation is possible without any special parts through filling the annular gap with injection mortar.
- The wide range of approved steel types allows for use in all corrosion resistance classes and offers maximum application safety.

### APPLICATIONS

- Steelwork constructions
- Timber constructions
- Guard rails
- Façades
- Staircases
- Steel brackets
- Machines
- Masts

### FUNCTIONING

- The system can be used with any of the following injection mortars: FIS V, FIS VW HIGH SPEED, FIS VS LOW SPEED, FIS EB, FIS VL and FIS GREEN.
- The injection system is suitable for pre-positioned and push-through installation when combined with threaded rod FIS A.
- The mortar is extruded bubble free from the drill hole base.
- The mortar bonds the entire surface of the threaded rod with the drill hole wall and seals the drill hole.
- The threaded rod is set manually, by lightly rotating it until it reaches the drill hole base.

### FOR USE WITH

FIS V mortar  
see page 130

FIS GREEN mortar  
see page 151

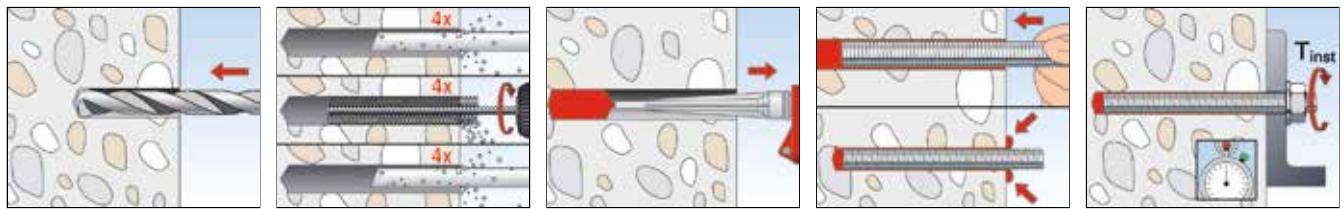

FIS EB mortar  
see page 126

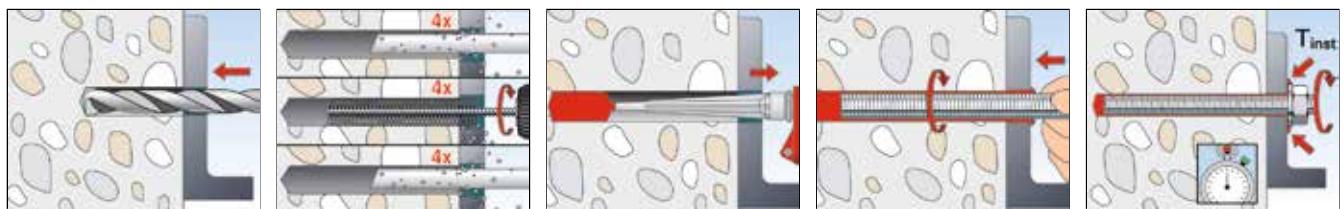

FIS VL mortar  
see page 136

<sup>1)</sup> The partial safety factors for material resistance as regulated in the ETAG001 as well as a partial safety factor for load actions of  $\gamma_L = 1,4$  are considered. As an single anchor counts e.g. an anchor with a spacing  $s \geq 3 \times h_{ef}$  and an edge distance  $c \geq 1,5 \times h_{ef}$ .

<sup>2)</sup> Minimum possible axial spacings resp. edge distance while reducing the permissible load.

<sup>3)</sup> For combinations of tensile loads, shear loads, bending moments as well as reduced edge distances or spacings (anchor groups) see assessment.

<sup>4)</sup> For higher concrete strength classes up to C50/60 higher permissible loads may be possible.

<sup>5)</sup> The given loads are valid for temperatures in the substrate up to +50 °C (resp. short term up to 80 °C). Erection of the drill hole by hammer drilling with best possible drill hole cleaning according assessment. The anchor may be installed in dry or wet concrete. For installations in flooded holes see assessment.

## LOADS

### Injection system FIS VL with threaded rod FIS A (property class 8.8)

Highest permissible loads for a single anchor<sup>1) 6)</sup> in concrete C20/25<sup>4)</sup>

For the design the complete European Technical Assessment ETA-10/0352 has to be considered.
